

Even Flow Accumulation Conveyor

The Even Flow Accumulation Conveyor is an extremely gentle method of accumulating and conveying fresh produce. Product is accumulated in a '3-sided' conveyor system, whereby the 3 – sides are connected via an angled backstop. When the system is empty, the backstop is in the full forward position. As the system begins to fill-up, the backstop gradually moves back. An electronic-eye , measuring product depth, controls the motion of the backstop. System dimensions and holding capacity are adjustable to suit commodity specifications are other customer requirements.

- Capacity up to 5000 pound of product
- Release product gently as required to maintain a continuous even flow
- Telescoping discharge conveyor gently delivers product to multiple distribution conveyors

Excellence in fresh produce handling

Up to 5,000 pound capacity

Product Gently delivered in to Evan Flow Accumulation Conveyor

Telescoping discharge conveyor gently delivers product to multiple distribution conveyors
